2,750 TEU N/B	\$43.0m	2,750 TEU 10yo	\$30.0m

Weekly Shipping Highlights

- **Our cross-sector ClarkSea Index remained fairly steady at \$22,685/day**, with the average in the year to date up 7% y-o-y and up 32% on the ten year trend
- **Another mixed week in the tanker market**; rates firmed in the USG across the board, driving average Aframax earnings up 35% w-o-w to \$41,850/day, while in the VLCC segment average earnings fell 9% w-o-w to \$25,281/day with rates in the East dropping back
- **Softer demand signals for the VLCC sector after OPEC+ delayed the planned easing of its production curbs by a further 3 months to April**, with the unwinding also now scheduled to take place over 18 months rather than 12 as previously planned as the group attempts to support oil prices against the backdrop of weak Chinese oil demand
- **Further softening in the bulkcarrier market**, with overall average bulkcarrier earnings falling by 7% w-o-w to \$10,803/day, the lowest level since Aug-23, amid generally weak enquiry, particularly in the Pacific
- **Steady week in the container freight market**, with the overall SCFI spot box freight index rising by 1% to 2,556 points; rates on the Far East-Europe westbound route saw marginal gains as carrier GRIs 'stuck', while Transpacific rates remained firm amid reports of some shippers 'frontloading' cargo
- **Ongoing healthy fixture volumes in the containership charter market**, with the feeder market seeing fixtures concluded at levels above last done, while several forward fixtures have been reported for larger ships amid tight tonnage availability for next year; our overall Containership Timecharter Rate Index rose marginally w-o-w to 175 points
- **Fairly steady week overall in the VLGC spot market**, with earnings on the Ras Tanura-Chiba route softening marginally to \$31,140/day, 26% below the year to date average
- **Continuing significant pressure on the LNG carrier spot market**, with the average spot rate assessment for a 2-stroke 174,000 cbm vessel dropping back 1% w-o-w to \$23,000/day, up 14% from the record low two weeks ago but still the second softest week on record
- **Newbuild orders placed** for Kamsarmaxes and Handysizes at Chinese yards, and a Capesize in Japan; overall newbuilding market activity has been strong in 2024 with appetite firm across the major shipping sectors – oil tanker and containership ordering has been running at more than double the run rate of the last five years
- **Further softening in secondhand tanker prices**; our overall secondhand tanker price index eased by a further 1% to 212 points, now down 10% since August and a new year to date low
- **Continued subdued conditions in the recycling market** with ongoing challenges and uncertainty stemming from weaker local currencies and persistent volatility in domestic steel markets in the ISC; so far this year just 8.6m dwt has been sold for recycling globally, below even the historically limited levels seen across 2022-23 amid continuing generally healthy shipping market conditions
- **Brazilian iron ore exports rose 7% y-o-y in November** amid steady production growth, whilst grain exports fell 42% y-o-y amid firm domestic soybean demand and weaker maize output
- **Mixed manufacturing sector conditions across major economies in November**, with PMIs tracking manufacturing trends in China and the US showing improvements last month, while weaker readings were seen in the Eurozone, Japan and India
- **This week's feature article**, drawing on data and analysis from the upcoming *Car Carrier Trade & Transport 2024*, reviews latest trends in the car carrier sector, where the market balance is starting to shift as supply growth accelerates and demand growth cools

Renewables Intelligence Network

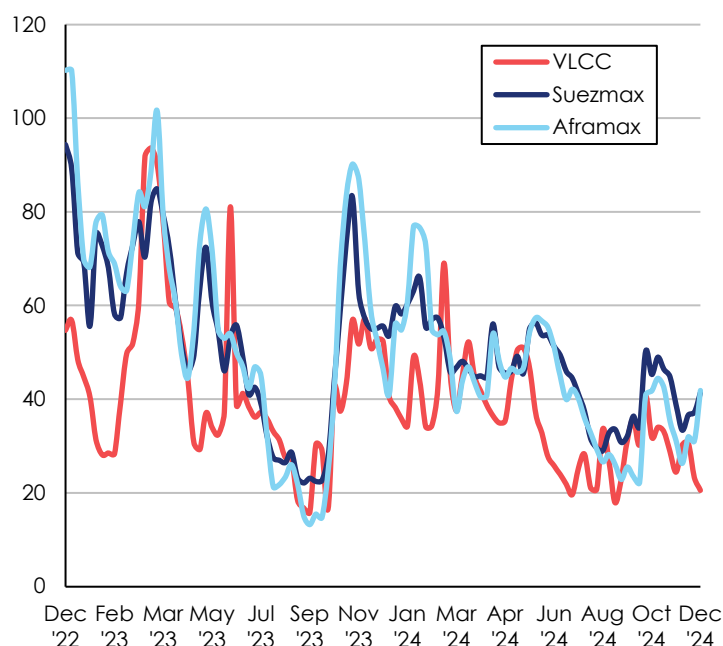

Leading data, intelligence and analysis around offshore renewables, including the growing offshore wind market

Crude Tanker Spot Market

Crude Tanker Spot Earnings (\$,000's/day)

Crude Tanker Highlights

• VLCC:

It was a generally softer week, as owners struggled to keep rates steady in most regions, with cargoes receiving several offers allowing charterers to apply downwards pressure. Some modern units have diverted to the Cape to explore Atlantic options rather than succumb to the extremely low rates in the East, which has lengthened the position list in the West significantly. Further delays to the unwinding of OPEC+ cuts have also dampened sentiment somewhat.

• Suezmax:

Rates generally firmed this week, with rates on the WAF-UKC route rising w-o-w to WS 92.5. Firmer sentiment has been driven by a stronger Aframax market in the USG following a pickup in enquiry. However, there is ongoing volatility as demand slowed towards the end of the week.

• Aframax:

It was a mixed week, though rates in the USG and MEG firmed. There was limited activity in the UKC/Baltic, with rates on the cross-UKC route steady w-o-w at WS 125. However, firm rates in the USG are expected to attract ballasters, which, combined with the expected bad weather over the weekend, could tighten the tonnage list. Meanwhile, a lack of activity in the Med led to softer rates.

Product Tanker Spot Market

Product Tanker Spot Earnings (\$,000's/day)

Product Tanker Highlights

• Clean Products:

West of Suez: It was a positive week for MR owners in the USG on the back of tight tonnage lists. Elsewhere, there was an influx of cargoes in the UKC, which gave owners the opportunity to apply some upwards pressure on rates. Meanwhile, it was a mixed week in the LR market. LR1 sentiment has been influenced by movements on the larger units. In the LR2 market, strong DPP earnings have potential to attract some units to switch to dirty trades. East of Suez: Rates generally firmed this week, with rates on the MEG-E. Africa route rising w-o-w to WS 195, though there is uncertainty around whether charterers should fix now or wait it out. Meanwhile, rates generally eased in the LR2 market and the tonnage list remains long. LR1 activity picked up slightly towards the end of the week which helped to stop the market slipping lower, but looking ahead there are still concerns about the volume of tonnage expected in late-December.

• Dirty Products:

It was a positive week for LR1 owners in the USG, with rates on the Caribs-USG route firming w-o-w to WS 175. Meanwhile, it was a generally softer week for Handies in the UKC.

Bulkcarrier Spot Market

Bulkcarrier Spot Earnings (\$,000's/day)

Bulkcarrier Highlights

• Capesize:

Further declines in the Capesize market this week on the back of limited enquiry across both basins and a lengthy tonnage list of vessels looking for cover. Overall, fleet-weighted average Capesize spot earnings dropped by 31% w-o-w to \$13,177/day, the lowest level since Sep-23.

• Panamax:

A more positive week in the Atlantic amid a steady flow of fresh orders and a tighter ballaster list in the South, with earnings on the Santos-N.China route rising by 15% w-o-w to \$10,389/day. Meanwhile in the Pacific, rates remained under pressure this week amid minimal December enquiry in Nopac and an oversupply of tonnage, with earnings on the Nopac-N.China route falling by 20% w-o-w to \$8,760/day, the lowest level since Jul-23.

• Handy:

In the Atlantic, firm fresh Transatlantic enquiry supported rates in the USG whilst Supramax rates came under pressure in the Pacific, partly owing to muted spot enquiry for Indonesian coal from China and India. Overall, average Supramax trip rates rose by 3% to \$12,150/day.

~Est. earnings basis 'eco' ship. 1yr TC rate for a non-eco VLGC available on SIN. ^Single voyage, delivery in next 3 weeks. *Basis 20.5k cbm ship until end 2023.

VLGC: In the West, a handful of early January fixtures were concluded, with larger vessels now in focus. Rates have remained in the low-mid \$100s/mt basis Houston-Chiba depending on vessel availability, with far less overhanging tonnage available in January than in recent months. Further cargoes later into January are still to emerge but sentiment remains flat going forwards, with owners and charterers happy to conclude at current levels.

• In the East, the third decade of December has been in focus with uncertainty remaining over the number of outstanding December cargoes. Rates are reported around \$50/mt basis Ras Tanura-Chiba for both MEG-East Asia and MEG-India, although a relet on subs was fixed at \$47/mt on Friday. The remaining Dec positions that can ballast West are expected to do so over the next week which could help to support rates in the East.

LNG: LNG spot carrier rates remained exceptionally soft this week, with the average spot rate assessment for a modern 2-stroke 174k cbm unit falling by 1% w-o-w to \$23,000/day, up 14% from the record low two weeks ago but still the second softest week on record. However, rising interest in spot tonnage in the West has led to slightly constrained tonnage supply in early Jan which could provide some support to end-December ex-USG fixtures.

Easychems except for: ~ Stainless Steel, " Speciality chems. Freight rates basis via CoGH since: *5th Jan-24, ^ 19th Jan-24, ^2nd Feb-24.

• On the transatlantic eastbound trade lane, rates for 5kt parcels saw some upward movement on the back of tightening prompt space in this direction, with charterers already looking closely at January dates. The freight rate for 5kt parcels on the Houston-Rotterdam route increased by \$6/mt w-o-w.

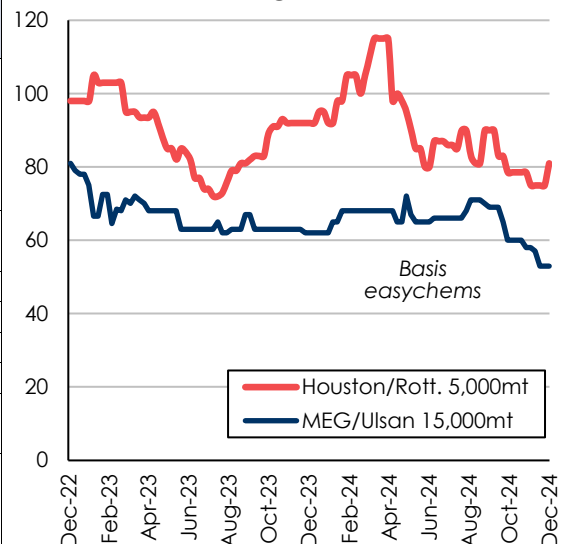

• Similarly, there was an increase in freight rates on the Houston to Santos route this week, with the rate for 5kt

parcels increasing by \$1.5/mt w-o-w amid a strong ex-USG December market overall.

• Conversely, ex-Rotterdam to Houston spot rates dropped this week due to healthy part cargo options for charterers and limited fixing interest outside of CoA volumes. The freight rate for 10kt parcels fell by \$1/mt w-o-w while for 5kt parcels the rate fell by \$1.5/mt.

• Rates on Asia to US Gulf routes increased this week, with rates ex-Ulsan

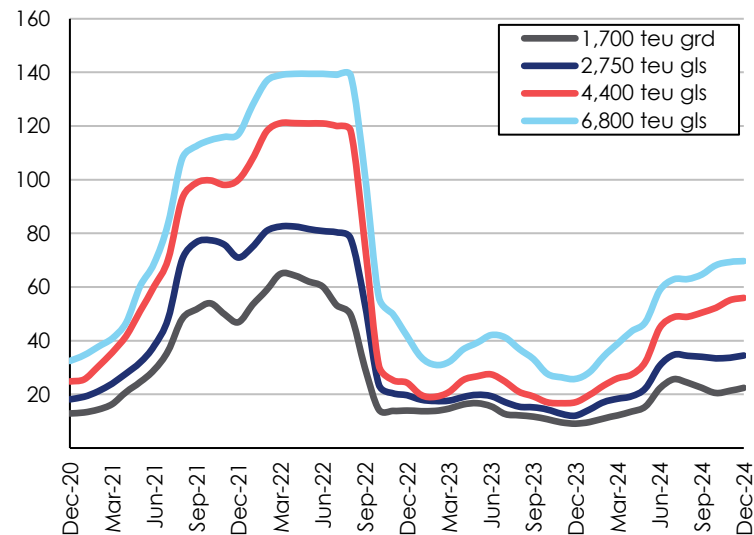

Chemical Freight Rates, \$/mt

to Houston for 5kt parcels rising by \$5/mt on the back of a recent surge in biofuel and gasoline interest which has tightened up part cargo space in this direction. Similarly, Singapore to Houston rates for smaller 1kt speciality parcels rose by \$5/mt this week.

Liner & Offshore Markets

Containership 6-12mth Charter Rates (\$,000's/day)

Containership Highlights

- Containership fixture volumes have remained healthy into December, with timecharter rates generally ticking up across the board. In the smaller sizes, charters have reportedly been secured for the last few modern 2,800 TEU units remaining this year, for a range of periods and typically at rates above last done, while new fixtures have been agreed for a handful of feeder ships in the Far East. Several forward fixtures have been reported in the larger sectors, with operators keen to retain tonnage against a backdrop of very tight supply in 2025. Our overall Timecharter Rate Index rose marginally w-o-w to 175 points, ~2.6x the late-2023 level.
- Container freight rates generally held steady this week. Rates on the Far East-Europe W/B saw marginal gains as GRIs 'stuck' amid blank sailings and healthy demand, while Transpacific rates remained firm by historical standards, with reports of some shippers 'frontloading' cargo.

Sale & Purchase Market

Sales Volumes & Values

Tankers:

There are no new tanker sales to report this week.

Activity in the tanker secondhand market has slowed in recent months, with reported sales averaging 2.6m dwt per month since mid-2024, down 30% from the average in 1H. Meanwhile, pricing has also been on a downwards trend, with our overall Secondhand Tanker Price Index falling to a new year to date low this week of 212 points, down by 10% since the end of August.

Dry Cargo:

In the Capesize sector, clients of SK Shipping have now concluded the sales of two scrubber fitted units, "K. CONFIDENCE" and "K. VICTORY" (both ~181,500 dwt, built 2013/2012, Sasebo HI, BWTS-fitted) for \$34.5m and \$32.5m respectively to two separate, but undisclosed buyers. Elsewhere, clients of Ocean Treasure Shipping have now sold the "OTSL ARTEMIS" (177,030 dwt, built 2008, SCS Shipbuilding, BWTS-fitted) for a price in the low-mid \$24ms.

Meanwhile, clients of AIMS Shipping have sold the vintage Panamax "SUMMER LADY" (72,083 dwt, built 1999, Kanasashi K.K., BWTS-fitted) for a price in the high \$6ms to Middle Eastern buyers.

Lastly, clients of Uni-Asia Shipping have concluded the sale of two Handysize vessels, "UNI CHALLENGE" and "VICTORIA HARBOUR" (both ~29,100 dwt, built 2012/2011, Yangzhou Nakanishi, C4x30t, BWTS-fitted) for an enbloc price of \$22m.

All data and information in this report are as reported up to noon on the date of publication.

Contact **Clarksons Valuations** at shipvalue@clarksons.com for any specific vessel or portfolio valuation requirements. Clarksons Valuations is the largest provider of valuation services to the shipowning and financial community, combining market leading expertise, research and technology.

A "Sources & Methods" document describing the methodology by which Clarksons Research gathers and processes the data in this report, including the calculation of voyage earnings for tankers and bulk carriers, is available on Shipping Intelligence Network. Further enquiries may be made to the addresses set out on the back page.

Shipbuilding News

- In the bulkcarrier sector, Guohang Ocean ordered 2 x 89,000 dwt Kamsarmaxes at Wuhu Shipyard. In addition to being methanol capable, the vessels are set to be fitted with propeller boss cap fins, pre-swirl stator fins and solar panels. Delivery is due in 2027. Elsewhere, Japan's Namura Shipbuilding received an order from DryDel Shipping for 2 x 182,000 dwt Capesizes, with delivery due in 2028. The units are set to be fitted with scrubbers and rudder fins.
- Meanwhile, in the product tanker sector, Greece's Evalend Shipping ordered 4 x 39,000 dwt Handysize tankers at China's Jiangsu New YZJ. The four ships are due to be delivered across 2026 and 2027.
- Contracting has been strong in 2024 so far, supported by firm ordering appetite from across the major shipping sectors; in capacity terms, the run rate of oil tanker and containerhip ordering in the year to date is more than double the 5-year average, while LNG carrier and bulk volumes have increased by a more modest (though still firm) 15% and 6% respectively. Ordering has reached even higher levels in some other sectors (chemical tankers and LPG carriers: x3 the 5-year average).

Newbuilding Price Index

Newbuilding prices vary by country of build, delivery and ship specification. Prices are end year/latest and assume a "European spec", 20/20/20/20% payments and "first class competitive yards" quotations. 3-month trend basis last 3 vs previous 3 months. ^LPG dual-fuel. ~LNG dual-fuel from Mar-22. *LNG dual-fuel from start 2024; see SIN for pricing for conventional fuel and methanol dual fuel vessels.

Ship Recycling Market News

- The ship recycling industry remains under significant pressure, with notable challenges from weaker local currencies and persistent volatility in the domestic steel markets in the ISC, which is contributing towards an uncertain environment for all involved. Overall, the recycling markets in India, Bangladesh and Pakistan continue to experience a period of inactivity amid the ongoing shortage of available tonnage for recycling. This year marks the third consecutive year of limited ship recycling, with only 8.6m dwt reported as sold for demolition in the year to date (2022-23 average: 11.0m dwt, 2010s average: 37.8m dwt) against a backdrop of generally firm markets reducing the flow of tonnage being circulated for sale.
- Meanwhile, MSC sent another containership for recycling to India this week, the 17th ship that MSC has sold to an Indian recycling yard this year amidst ongoing 'green' fleet renewal efforts. Overall, there has been a total of 56 containerships totalling c.80,000 TEU reported as sold for recycling in the year to date.

• Data published this week highlighted mixed manufacturing conditions across some of the world's largest economies. The US and China witnessed relatively firm improvements to their manufacturing PMIs in Nov; ISM's PMI for the US rose to a five-month high of 48.4 points in Nov (Oct: 46.5, the lowest the index has reached since Jul-23), while China's official PMI ticked up to 50.3 points in Nov (Oct: 50.1). However, conditions softened in the Eurozone; HCOB's Eurozone manufacturing PMI fell to 45.1 points in Nov, down from 45.8 in Oct, marking a deepening contraction for the bloc's manufacturing sector. France and Germany, the Eurozone's two largest economies, posted particularly poor performances, with the manufacturing PMI for the former falling to 43.1 points, from 44.5 points in Oct (the sharpest m-o-m decline since 2020), while the latter's remained at 43.0 points. Elsewhere, Japan's manufacturing PMI slipped from 49.2 points in Oct to 49.0 points in Nov, while India's eased from 57.5 points to 56.5 over the same period.

OPEC Production & VLCC Earnings

Major Oil Trades News:

- OPEC+ has delayed the easing of its production curbs by a further 3 months, against the backdrop of softer oil prices. OPEC+ is now scheduled to begin unwinding 2.2m bpd worth of cuts from April 2025, with the easing now planned to take place over 18 months (up from 12 months previously expected). Across Jan-Oct '24, OPEC oil output averaged 32.6m bpd, down 4% y-o-y, as the group has sought to boost oil prices in the face of Chinese oil demand weakness and continued supply growth from outside the group.

Iron Ore Exports & Capesize Earnings

Major Bulk Trades News:

- Latest customs data shows that Brazilian iron ore exports grew by 7% y-o-y in November to 34mt, the firmest November volumes since before the Brumadinho disaster in Jan 2019. In all, exports were up by ~6% y-o-y across Jan-Nov amid the ramp up of production at Vale's Southern System of mines. Exports to main buyer China were up 18% y-o-y in November at 25mt, partly owing to firm interest in lower grade iron ore fines, bringing total exports to China in 2024 so far to a record 256mt.
- Meanwhile, Brazilian grain exports were down sharply in November, falling 42% y-o-y to 7.3mt, the weakest November since 2021. This comes amid higher domestic soybean crushing for biofuel feedstock and a smaller maize harvest this year on the back of very wet weather in key growing regions in mid-2024.

Alternative Fuel Capable	2,126 (1.9% of total)	2,162* (1.9%)	123.5 (7.4%)	126.6* (7.6%)	1,945 (29.1%)	144.0 (52.3%)	(2.0% of Global GHG)

Percentages basis world fleet/orderbook 100+ GT. *Figures basis fitted fleet plus ordered retrofits. Data will underestimate the total market size. ^GHG emissions basis estimated total GHG emitted by the world fleet (100+ GT) on a 'well-to-wake' basis in CO2 equivalent; estimates on a theoretical basis and subject to a wide range of assumptions including on trading patterns, taking into account variation in active capacity on a limited, high-level basis only. Further information including details on additional technology, equipment and emissions is available on World Fleet Register.

Note: Fleet/orderbook data includes merchant vessels 100+ GT, as at year end/start month. Dwt figures are metric. For more detailed fleet data see World Fleet Register. *World fleet value basis estimates of the value of each vessel based on type, size and age. For specialised & non-cargo vessels, coverage may not be comprehensive. Orderbook value basis reported newbuilding prices where possible, or estimated contract prices adjusted for type, size and date (see also World Fleet Monitor). Owner nationality fleet and orderbook data basis primary reference company, defined as the company with the main commercial responsibility for the ship.

Car Carrier Market: A Change Of Direction

The car carrier sector has been one of the 'hottest' parts of shipping in recent years, characterised by surging demand, elevated freight rates and operator earnings, record charter rates and a major wave of newbuild investment. The balance in the sector is starting to shift though, and here, drawing from the upcoming *Car Carrier Trade & Transport*, we assess the factors shaping the outlook...

On A Roll

'Hot' car carrier markets in recent years have mainly been driven by rapid demand growth. Global 'deep sea' car trade is on track to hit a record 24.5m cars this year, an impressive 16% above pre-Covid (2019) levels. In large part this reflects surging exports from China, which has this year overtaken Japan to become the world's largest car exporter (shipments on track to hit 5.3m cars). The EU/UK (mostly EVs) and Russia (after the pull-out of 'Western' brands) are the top markets for Chinese cars, with long-haul volumes lifting the distance of seaborne car trade, a trend boosted this year by the re-routing of ships away from the Red Sea (generating an additional 7% car-mile distance 'kicker'); car-mile trade is up ~34% versus 2019 levels in 2024. This compares to minimal supply growth; car carrier fleet capacity at start '24 stood just 1% above start '19.

At A Crossroads

This year, however, supply-demand fundamentals are starting to shift. Firstly, car trade growth has cooled; our seaborne car trade indicator was up ~3% y-o-y across Jan-Oct, down from 18% growth in full year 2023. This reflects a number of factors; 'pent-up' demand post-Covid has mostly been worked through in key markets, car sales in Europe are facing headwinds from high prices, elevated finance costs and uncertainty around the pace of the EV transition, while exports from Japan and Korea have been curbed by competition from Chinese brands in key markets and some logistical challenges. Chinese exports remain a bright spot (2024f: +26%), as do imports into the Middle East and ASEAN. Meanwhile, fleet growth is accelerating as newbuild deliveries ramp up; the car

carrier fleet will have grown by 8% in 2024, with new deliveries adding to overall vessel supply and starting to put a degree of pressure on older, smaller vessels. Our guideline 1 year TC rate for a 5,000 ceu PCTC has now fallen by >40% from its early 2024 high, though our 6,500 ceu rate has only fallen by 17%.

Where To?

Looking ahead, a range of factors are shaping the outlook. The next phase of the cycle starts from a strong position; operators are still seeing firm earnings, have strong balance sheets and are renewing freight contracts at firm levels, while charter rates remain exceptional by historical standards. Additionally, signifi-

cant car trade volumes are still being moved in containers or on other vessels, providing a buffer of 'unmet' demand that the car carrier fleet can look to 'win back' as capacity grows.

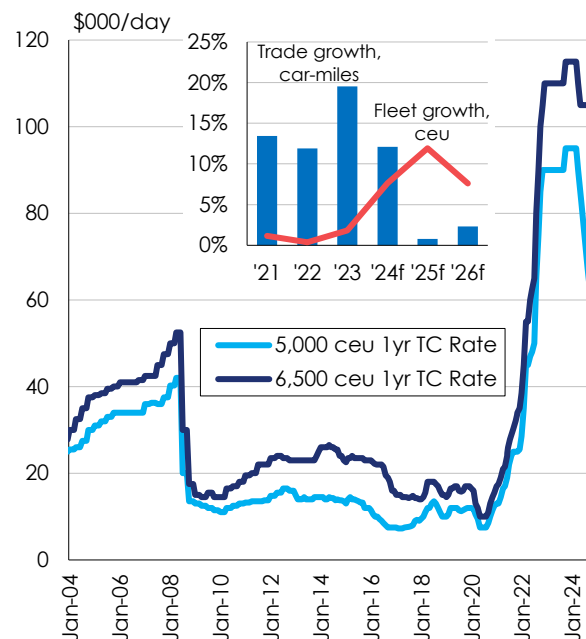

Overall though, our base case outlook suggests further easing in fundamentals, with fleet growth in 2025-26 (~12% and ~8%) set to outpace demand (~1-2% p.a.?). There are a number of risks, from EU tariffs on Chinese EVs (~2% of global trade, negotiations ongoing) to potential easing of Red Sea rerouting (no sign yet), but also a fleet to renew (>50% >15yr old). So, there's lots to track for those assessing the road ahead for the car carrier market; *Car Carrier Trade & Transport 2024* has the details...

Graph of the Week

Car Carrier Markets In Focus: Eyes On The Road Ahead

The blue lines on the main graph show our guideline 1 year timecharter rates for both 6,500 ceu and 5,000 ceu PCTCs. The inset graph shows estimated/projected growth in global seaborne car trade in car-mile terms (blue bars), compared to car carrier fleet growth in capacity terms (red line). For further data, analysis and outlook see the upcoming *Car Carrier Trade & Transport 2024* on *Shipping Intelligence Network*.
